Forward Muon Detector Upgrade

Completely new forward muon system for Run II

Forward Muon Trigger System Status

- ◆ All parts for all 48 octants are at Fermilab
- ◆ 43 out of 48 frames are made, all done by Christmas
- ◆ Calibration system modules production: keeping pace with octants assembly
- ◆ 28 out of 48 octants assembled
- ◆ Within 1 week on schedule, finishing C layer in ~10 days
- ◆ Critical items:
 - ◆ B layer drill fixture
 - ◆ start active engineering design for installation

Forward Muon Tracking Status

- ◆ All 2300 mini-drift tubes for A layer are tested at Fermilab
- ◆ All C layer tubes are at Fermilab, longest (~6m) tubes are tested, failure rate within 1-2%
- ◆ Production of tubes at Dubna is in a mixed shape (see plot)
- ◆ Assembly of A octants:
 - ◆ test results of first octant are OK
 - ◆ all changes to drawings are done
 - ◆ parts from vendors are received
 - ◆ parts modifications is in progress
 - ◆ re-assembling first octant today
 - ◆ 2 more octants are already in a queue
- ◆ Critical items:
 - ◆ inventory of parts for mass assembly
 - ◆ Fermilab techs manpower and JINR visitors presence
 - ◆ last frames for A layer
 - ◆ Availability of drawings and parts for B/C layers (honeycomb, etc.)

Installation and commissioning manpower

- **Pixels:**

- ◆ 2 engineers and 2 drafters for ~8 months
- ◆ 4 techs for ~10months
- ◆ electronics/software support: 2 engineers/physicists till roll in
- ◆ 4 physicists for commissioning: starting April till roll in

- **MDTs:**

- ◆ 2 engineers and 2 drafters for ~8 months
- ◆ 4 techs for ~10months
- ◆ electronics/software support: 2 engineers/physicists till roll in
- ◆ 5 physicists for commissioning: starting March till roll in

- **Infrastructure**

MDT Octant Assembly

Forward Muon Trigger C Layer Octant Assembly

- Counters mounting hardware, cables and calibration system installed

C Layer Assembled Octant

- Assembled octant in test area:
